

Webinar: From National Forest Inventories to European Level Forest Monitoring

The New EU Forest Strategy 2030 recognises the need to develop a European forest monitoring system in all the Member States for information based decision making. The purpose of the webinar organised by Luke and ENFIN is to continue the discussion how National Forest Inventories (NFIs) can contribute to a European level forest monitoring system. The Webinar topics cover the potential of NFIs in monitoring biodiversity and climate change impacts at European level, as well as how to use NFIs in strategic forest planning and decision support.

Time: 27.1.2022 at 13:00-15:00 (CET)

Place: Microsoft Teams

PROGRAMME

-
- 13:00 Opening**
Antti ASIKAINEN, Executive Vice President, Research, Luke
-
- 13:05 How we can use NFI as a decision support tool – experiences from Finland**
Kari T. KORHONEN, Luke & Petteri PACKALEN, UEF, Finland
-
- 13:15 Towards a systematic and continuous monitoring of climate change impacts on forest productivity in Europe**
Clémentine OLS, IGN, France
-
- 13:30 Potential of NFIs in monitoring forest biodiversity at European level**
Iciar ALBERDI, INIA, Spain
-
- 13:45 The ENFIN approach to European forest monitoring (NFIs, RS, PathFinder)**
Klemens SCHADAUER, BFW, Austria
-
- 14:00 The forest related information needs in Europe – presentations from the European Commission**
Speakers to be confirmed
-
- 14:30 Panel Discussion with the speakers**
Moderator: Markus LIER, Ministry of Agriculture and Forestry of Finland
-
- Discussion**
-
- 15:00 Closing words**
-
